DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4, 6-17 and 19-25 are allowed.

Reason for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach the following:

In regards to claim 1 the prior art does not teach grouping a set of route targets from the plurality of route targets with respect to each customer equipment node within the network to form a group of route target sets; removing duplicate route target sets from the group of route target sets to form a reduced size of route target sets based on the route targets between duplicate route target sets being the same; wherein a memory includes a virtual routing and forwarding (VRF) element to route target data mapping for each of a plurality of provider edge routers (PEs) and wherein all of the customer edge routers (CEs) with the same route target (RT) set on one PE share one VRF.

In regards to claim 8 the prior art does not teach a computer system converts the high-level network topology data into a set of route targets to be assigned to virtual routing and forwarding elements, the set of route targets stored in a memory, wherein the memory includes a virtual routing and forwarding (VRF) element to route target data mapping for each of a plurality of provider edge routers (PEs) and wherein all of the customer edge routers (CEs) with the same route target (RT) set on one PE share one VRF.

In regards to claim 10 the prior art does not teach assigning route targets to each of the customer edge routers based on topology requirements of the backbone network and based on the set of rules, wherein route targets are grouped into sets and duplicate sets of route targets are removed based on the route targets between duplicate sets of route targets being the same wherein a memory further includes a virtual routing and forwarding (VRF) element to route target data mapping for each of a plurality of provider edge routers (PEs) and wherein all of the customer edge routers (CEs) with the same route target (RT) set on one PE share one VRF.

In regards to claim 21 the prior art does not teach a computer system includes a set of rules to convert the high-level network topology data into a set of route targets to be assigned to virtual routing and forwarding (VRF) elements, the set of route targets stored in a memory; and wherein the memory further includes a VRF to route target data mapping for each of a plurality of PEs and wherein the CEs with the same RT set on one PE share one VRF.

The prior art alone or in combination fails to jointly suggest or teach the claimed combination of features as taught by the instant application. Therefore claims 1-4, 6-17 and 19-25 are to be deemed allowable over prior art.
